EXPERIENCE

Intermo | Full Stack Developer Intern *Oct 2026 – Present*

- Developing a full-stack Learning Management System (LMS) using React and Express.js, with TanStack Query for frontend data fetching and server-state management.
- Implementing data persistence using Prisma ORM and maintaining database migrations to manage schema changes.

PROJECTS

Waltz *Jul 2026 – Present*

FastAPI-native Authentication & Identity Management Framework
Stack: Python · FastAPI · Pydantic · JWT · OAuth 2.0 · OIDC · AsyncIO
GitHub

- Built a **stateful, storage-agnostic authentication framework** supporting local and federated authentication, session tokens, and email OTP verification.
- Designed a **contract-driven RPC bus** enabling the framework to request application-owned operations such as user lookup, persistence, session storage, and email delivery.
- Implemented **provider-agnostic OAuth 2.0 and OIDC flows** with JWT token-response handling, Pydantic validation, structured logging, and centralized exception handling.

Naissance *Aug 2026*

Git Repository Genesis Utility
Stack: Python · Git · GitHub · PyPI
GitHub | PyPI

- Built a **zero-prompt CLI** that creates and configures local Git repositories alongside corresponding GitHub repositories in a single command, reducing setup time by **~75%** and eliminating **5–8 manual steps**.
- Designed **100% non-interactive, state-aware repository initialization** supporting nonexistent, empty, populated, and already-initialized Git directories with configuration-driven defaults.
- Published the open-source utility to PyPI, reaching **1.1k+ total downloads and 280+ non-mirrored downloads** since launch; repository is open to contributions.

BriarCastle *Jun 2026 – Present*

Personal Web & Deployment Ecosystem
Stack: React · JavaScript · Zod · YAML · Cloudflare Workers · GitHub Pages
GitHub | briarcastle.com

- Built and maintained a **React-based multi-subdomain web ecosystem** for personal projects, including dedicated project, profile, and API deployments.
- Developed a **schema-driven project registry** using YAML and Zod, with Cloudflare Worker routing for archived deployments while preserving paths and query parameters.
- Maintained custom-domain, DNS, deployment, and routing infrastructure, **debugging production failures across Cloudflare, certificates, CAA records, and DNSSEC configuration**.

EDUCATION

K.R.T. Arts, B.H. Commerce & A.M. Science College, Nashik

Bachelor of Science (B.Sc.) in Cyber and Digital Science *Expected June 2027*
CGPA: 9.36/10 · (Recent Semester: 9.45/10) | Top Academic Rank

SKILLS

Languages: Python · TypeScript · JavaScript · HTML5 · CSS3
Frameworks & Libraries: FastAPI · React · Node.js · Express.js · SQLAlchemy · Prisma · Pydantic · Zod · TanStack Query
Security & Authentication: JWT · OAuth 2.0 · OpenID Connect (OIDC) · Session Management
Architecture: AsyncIO · RPC Architecture · API Design · Schema Validation
Tools & Infrastructure: Git · GitHub · Cloudflare Workers · PyPI · Postman
